

PARTNER BRIEF • CONFIDENTIAL

ParSec Market Brief

Working title — product name not final.

A personal-portfolio intelligence agent. **A daily pre-market brief on WhatsApp**, covering your exact holdings across Tadawul, EGX, LSE and US markets — in the language the news actually breaks in.

WHAT IT IS	One message before the open, about the positions actually held — disclosures, moves and the context around them.
------------	--

WHAT IT IS NOT	Signals, tips, price targets or recommendations. The product refuses to tell anyone what to buy.
----------------	--

WHERE IT LANDS	WhatsApp, 08:00, on the number the investor already reads — no new app, no new login.
----------------	---

PAID APIS

AUGUST 2026 VERSION 1.0 STATUS DEPLOYING — FIRST BRIEF 14 AUG

PREPARED BY OMAR MOSALLAM

Over-served with noise. Under-served with facts.

A retail investor holding Saudi, Egyptian, UK and US positions is not short of market content. They are short of information about the specific things they own, delivered early enough to matter.

FRAGMENTATION

Four apps, one portfolio

Positions sit across a Saudi broker, an Egyptian broker, a UK/US platform and a spreadsheet. No single view — and no alert surface that knows what is actually held.

LANGUAGE SPLIT

Two languages, half the coverage

Material disclosures break in Arabic on Tadawul and EGX channels; the global read breaks in English. Most investors follow one side and quietly miss the other.

SUBSTITUTION

Hype fills the vacuum

Reels, Telegram tips and forwarded voice notes arrive in seconds. The filing behind the same stock — if there is one — arrives late, or never reaches the holder.

The wealth killer is not a missed pick. It is the panic sell on a headline read without context, and the FOMO buy on a reel with no disclosure behind it.

WHAT THAT COSTS, CONCRETELY

- 01 **Late reaction.** A disclosure that moves a held position is read days later, after the move has already been priced in.
- 02 **Wrong reaction.** A scary headline about a sector triggers a sell in a position the headline never referred to.
- 03 **No reaction at all.** The investor stops opening the apps, and the portfolio drifts unattended for months.

WHERE THE INFORMATION ACTUALLY LIVES

SAUDI • TADAWUL Arabic Exchange disclosures, Argam	EGYPT • EGX Arabic Local wires, EnterpriseAM	UK • LSE ETFS English Global wires, fund notices	UNITED STATES English SEC filings, global wires
---	---	---	--

Four markets, two languages, one holder. No consumer product currently spans that set.

What ships today

Version 1 runs daily in production. Everything on this page is built, tested and delivering — it is not a roadmap slide.

Daily 08:00 WhatsApp brief

One message before the open. Scheduled, delivered and confirmed — no app to remember to check.

Per-holding watchlist

Coverage is defined by what is actually owned — Saudi Tadawul, EGX, LSE-listed ETFs and US names.

Verified free feeds

Argaam disclosure RSS, Google News in Arabic and English, EnterpriseAM, Yahoo price data.

Significant-move flags

Price moves past a set threshold are surfaced against the day's news, not reported in isolation.

Smart-money tracking

SEC 13F filings (Berkshire and peers) plus Tadawul major-holder disclosures, matched to the watchlist.

Arabic + English entity matching

The same company is recognised across both languages and both naming conventions before filtering.

On-demand brief

Sending market brief at any hour returns a fresh run — the same pipeline, on request.

DESIGN GUARDRAIL

Monitoring and context. Never a buy or sell signal.

This is a deliberate product constraint, not a missing feature. The published research on retail news-trading is consistent: whatever edge exists in reacting to public news does not survive spreads, fees and slippage. So the brief never issues a recommendation. Its job is attention-routing — putting the right facts about the right holdings in front of the investor early, so the decision that follows is deliberate rather than reactive.

No recommendations

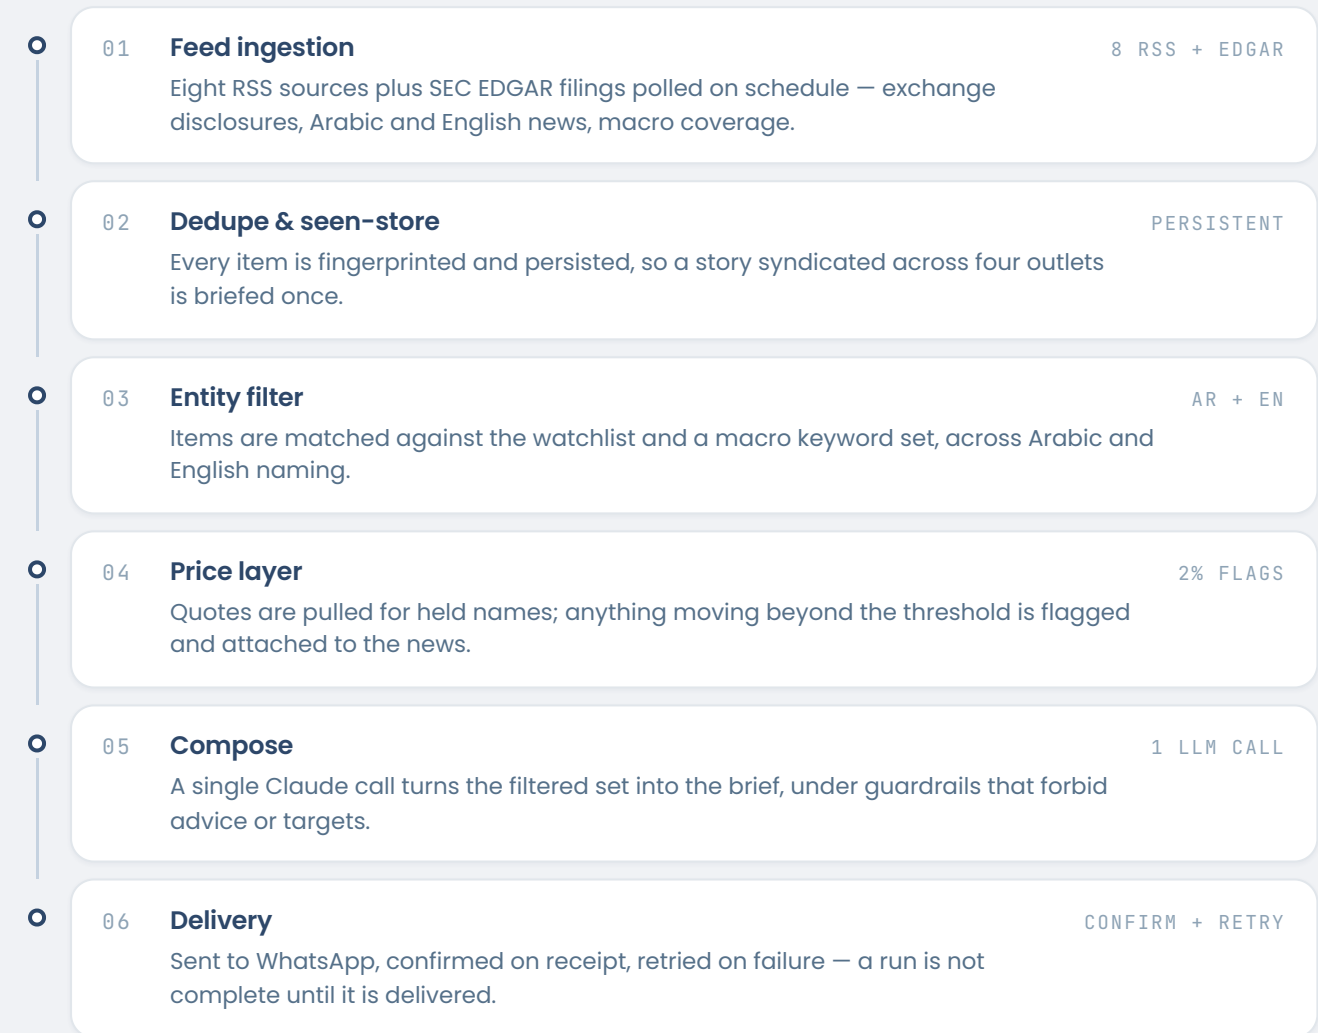

No price targets

Sources cited per item

Silence when nothing happened

One pipeline, six stages

Everything runs on infrastructure that already exists. One model call per brief, no paid data vendors, and a delivery step that verifies the message landed.

RUNTIME	SCHEDULER	HOSTING	DATA COST	TEST SUITE
Python	APScheduler	Existing VPS	Zero paid APIs	112 unit tests

Marginal cost per additional user is one model call per brief. The feed, dedupe and price layers are shared, which is what makes the multi-user step on the next page cheap rather than a rebuild.

Where a partner comes in

The single-user product works. The next six items turn it into something other people can be onboarded onto and charged for — engineering that is scoped, not speculative.

BUILD QUEUE

01	Multi-user core	Each user gets their own watchlist, number and schedule on the shared pipeline.
02	Onboarding flow	Self-serve setup over WhatsApp — holdings in, first brief out, without a human in the loop.
03	Portfolio ledger sync	Positions and weights kept current, so the brief is proportional to actual exposure.
04	More markets	UAE and Kuwait next — the feed and entity layers are built to take new exchanges.
05	Arabic brief variant	Full Arabic output, not translation — the sources are already read in Arabic.
06	Paid tiers	Packaging, billing and limits on top of a per-user cost that is already close to zero.

THREE OPEN LANES

LANE A

Growth

Distribution into the investor communities that already exist in Riyadh, Cairo and Dubai.

- First hundred users
- Community and referral channels
- Pricing tested against real willingness to pay

LANE B

Product

Owning what the brief says and how onboarding feels as the user base stops being one person.

- Brief format and editorial standard
- Onboarding and retention
- Market and asset-class priorities

LANE C

Capital

Funding the runway to go from a working v1 to a supported, multi-market service.

- Engineering time to multi-user
- Compliance and licensing review
- Paid data where free feeds run out

These are lanes, not an offer. Which one a partner would own — or whether it is a mix — is exactly the conversation this brief is meant to start.

05 · NEXT STEP

Read the repo, try the live brief, then let's talk.

Everything in this document can be verified before any conversation about terms.
Three things are available on request, today:

01	The repository	Full source, the I12-test suite, and the guardrail prompts that keep the brief out of advice.
02	A live brief	This morning's actual output, unedited, on a real multi-market watchlist.
03	A walkthrough	Thirty minutes through the pipeline, the cost model and what multi-user really takes.
