

PARTNER BRIEF • CONFIDENTIAL

ParSec Market Brief

Working title — product name not final.

A personal-portfolio intelligence agent. **A daily pre-market brief on WhatsApp**, covering your exact holdings across Tadawul, EGX, LSE and US markets — in the language the news actually breaks in.

WHAT IT IS	One message before the open, about the positions actually held — disclosures, moves and the context around them.
------------	--

WHAT IT IS NOT	Signals, tips, price targets or recommendations. The product refuses to tell anyone what to buy.
----------------	--

WHERE IT LANDS	WhatsApp, 08:00, on the number the investor already reads — no new app, no new login.
----------------	---

AUGUST 2026 VERSION 1.0 STATUS DEPLOYING — FIRST BRIEF 14 AUG

PREPARED BY OMAR MOSALLAM

Over-served with noise. Under-served with facts.

A retail investor holding Saudi, Egyptian, UK and US positions is not short of market content. They are short of information about the specific things they own, delivered early enough to matter.

FRAGMENTATION

Four apps, one portfolio

Positions sit across a Saudi broker, an Egyptian broker, a UK/US platform and a spreadsheet. No single view — and no alert surface that knows what is actually held.

LANGUAGE SPLIT

Two languages, half the coverage

Material disclosures break in Arabic on Tadawul and EGX channels; the global read breaks in English. Most investors follow one side and quietly miss the other.

SUBSTITUTION

Hype fills the vacuum

Reels, Telegram tips and forwarded voice notes arrive in seconds. The filing behind the same stock — if there is one — arrives late, or never reaches the holder.

The wealth killer is not a missed pick. It is the panic sell on a headline read without context, and the FOMO buy on a reel with no disclosure behind it.

WHAT THAT COSTS, CONCRETELY

- 01 **Late reaction.** A disclosure that moves a held position is read days later, after the move has already been priced in.
- 02 **Wrong reaction.** A scary headline about a sector triggers a sell in a position the headline never referred to.
- 03 **No reaction at all.** The investor stops opening the apps, and the portfolio drifts unattended for months.

WHERE THE INFORMATION ACTUALLY LIVES

SAUDI • TADAWUL Arabic Exchange disclosures, Argam	EGYPT • EGX Arabic Local wires, EnterpriseAM	UK • LSE ETFS English Global wires, fund notices	UNITED STATES English SEC filings, global wires
---	---	---	--

Four markets, two languages, one holder. No consumer product currently spans that set.

What ships today

Version 1 is built, tested and deploying now — the first brief goes out on 14 August. Everything on this page already exists. None of it is a roadmap item.

Daily 08:00 WhatsApp brief

One message before the open. Scheduled, delivered and confirmed — no app to remember to check.

Per-holding watchlist

Coverage is defined by what is actually owned — Saudi Tadawul, EGX, LSE-listed ETFs and US names.

Sources we tested ourselves

Argaam company disclosures, Google News in Arabic and English, EnterpriseAM, Yahoo price data.

Significant-move flags

Price moves past a set threshold are surfaced against the day's news, not reported in isolation.

Watches the big investors

What Berkshire Hathaway and its peers just bought or sold, plus Tadawul major-holder changes.

Reads Arabic and English

The same company is recognised under its Arabic name, its English name and its ticker.

On-demand brief

Sending market brief at any hour returns a fresh run — the same pipeline, on request.

DESIGN GUARDRAIL

Monitoring and context. Never a buy or sell signal.

This is a deliberate product constraint, not a missing feature. The published research on retail news-trading is consistent: whatever edge exists in reacting to public news does not survive spreads, fees and slippage. So the brief never issues a recommendation. Its job is attention-routing — putting the right facts about the right holdings in front of the investor early, so the decision that follows is deliberate rather than reactive.

No recommendations

No price targets

Sources cited per item

Silence when nothing happened

The hard part is already done

Most of the effort in this product went somewhere invisible: finding out what actually works, and throwing away what does not. Here is what that took.

40+

SOURCES TESTED
BY HAND

News outlets, data providers and market services across Saudi Arabia, Egypt and the US. Most were dead, paywalled, blocked to machines, or quietly publishing nothing. **Nine survived.**

5

ACADEMIC STUDIES
REVIEWED

All of them on one question: does trading the news actually make money? The evidence says a retail edge does not survive costs. **That finding is the design.**

112

AUTOMATED TESTS
WRITTEN

The product is built, tested and deploying — first brief on 14 August. Not a prototype, not a demo, and not a slide deck with a waiting list behind it.

30k – 98k

STAR PROJECTS REVIEWED

We read the major open-source trading agents on GitHub before writing our own — the ones with thirty to ninety-eight thousand stars behind them. They are impressive, and most of them make the same bet: that a model can pick trades. We kept their engineering patterns and skipped that assumption, because the studies above say it does not pay.

Nine working sources, one honest design decision, and a product that runs — that is what the research bought.

Every number on this page is checkable. The source tests, the studies and the project review all sit in the repository, alongside the product itself.

Where the information comes from

Nine sources, chosen from more than forty we tested by hand. Each is the original publisher or the reference that market actually reads — checked daily, free, and the Arabic ones read in Arabic.

MARKET	SOURCE	WHAT IT PROVIDES	FEEDS
SAUDI MARKET	Argaam	Main news plus official company disclosures — the closest free view of Tadawul filings.	2
	Google News ARABIC • SAUDI	Wider Saudi coverage, read in Arabic in the edition Saudi readers see.	1
EGYPT MARKET	EnterpriseAM	Full-text business feed — the daily reference for Egyptian market and policy news.	1
	Google News AR + EN • EGYPT	Both language sides of the same market, pulled in parallel, neither translated.	2
GLOBAL & US	Yahoo Finance	Per-company news, plus the quote data behind every price in the brief.	1
	Google News POLICY & MACRO	Fed decisions, tariffs and executive orders — what moves everything at once.	1
FILINGS	SEC EDGAR	What the big institutions own, Berkshire among them, from the regulator's own database.	Direct

Eight news feeds plus the US regulator's filings database — the nine sources counted on the cover. No scraped forums, no tip channels, no reposts.

Watching what the professionals do

UNITED STATES • LIVE

New filings from tracked giants — Berkshire first — read from the regulator's own database. Biggest buys and exits pulled out.

SAUDI ARABIA • LIVE

Official Tadawul disclosures already flow in, including changes in major shareholders.

EGYPT • ROADMAP

Egyptian insider and major-holder moves are next on the build queue. Not built yet.

One caveat, stated plainly: these filings lag by weeks. Context for long-term holdings — never a copy-trading signal, and never a recommendation.

What happens at 07:58 every morning

Seven steps, start to finish, on infrastructure that already exists. One model call per brief, no paid data vendors, and a run that is not finished until the message is confirmed delivered.

- 01

Wake

07:58 CAIRO

The scheduler fires on Cairo time, confirms today's brief has not already run, and checks that a covered market is open somewhere.
- 02

Sweep

ALL 9 SOURCES

All nine sources are pulled in one pass. Every headline is fingerprinted against a 14-day memory, and anything already briefed is dropped.
- 03

Filter

ARABIC + ENGLISH

Survivors are matched against the owner's actual watchlist — Arabic names, English names and tickers — plus macro keywords. Disclosures rank first.
- 04

Prices

2% MOVE

Every held symbol is quoted. Moves beyond two percent are flagged and attached to the story that explains them, never reported bare.
- 05

Smart money

BIG INVESTORS

The SEC is checked for filings from tracked institutions since yesterday. If Berkshire filed, the largest adds and exits are extracted.
- 06

Compose

ONE MODEL CALL

One model call turns the pile into a twenty-line brief, under a hard rule that forbids buy, sell and hold language. If the output does not match the mandated format exactly, the system ships a plain data digest instead. It cannot send an error, an apology, or advice.
- 07

Deliver

CONFIRMED SENT

Sent to WhatsApp, confirmed by reading the chat back, retried once if missing. The brief is archived so tomorrow's run knows what today's already said.

RUNTIME	RUNS ON	TIME TO RUN	DATA COST	TESTED BY
Python	Existing server	One pass	Nothing	112 tests

Where a partner comes in

The single-user product works. The next six items turn it into something other people can be onboarded onto and charged for — engineering that is scoped, not speculative.

BUILD QUEUE

01	Multi-user core	Each user gets their own watchlist, number and schedule on the shared pipeline.
02	Onboarding flow	Self-serve setup over WhatsApp — holdings in, first brief out, without a human in the loop.
03	Portfolio ledger sync	Positions and weights kept current, so the brief is proportional to actual exposure.
04	More markets	UAE and Kuwait next — the product is already built to take new markets.
05	Arabic brief variant	Full Arabic output, not translation — the sources are already read in Arabic.
06	Paid tiers	Packaging, billing and limits on top of a per-user cost that is already close to zero.

THREE OPEN LANES

LANE A

Growth

Distribution into the investor communities that already exist in Riyadh, Cairo and Dubai.

- First hundred users
- Community and referral channels
- Pricing tested against real willingness to pay

LANE B

Product

Owning what the brief says and how onboarding feels as the user base stops being one person.

- Brief format and editorial standard
- Onboarding and retention
- Market and asset-class priorities

LANE C

Capital

Funding the runway to go from a working v1 to a supported, multi-market service.

- Engineering time to multi-user
- Compliance and licensing review
- Paid data where free feeds run out

These are lanes, not an offer. Which one a partner would own — or whether it is a mix — is exactly the conversation this brief is meant to start.

07 · WHAT'S ON GITHUB TODAY

This is not an idea. The repository exists.

A private repository

The full working product, not a sample or a stripped demo. You get access.

Two commands to run it

Download it and start it. It runs on any laptop, no special setup.

98 tests pass from a clean copy

Out of 112 written. Nothing to configure first — you can check the work yourself.

Documentation, and this brief

Written up in full, including the document you are reading, kept inside the repository.

| Read the repo, see the first brief, then let's talk.
